

Concrete Construction

Annual Index of Articles: 1974

ARCHITECTURAL CONCRETE

The Sydney Opera House
Down under wonder of the World 2 pp; Mar. 113

ASSOCIATIONS

Hallmarks of the Concrete Industry
Keynote address at the American Society for Concrete Construction Convention 3 pp; May 225
Why Government Listens to Associations
The direct, democratic and effective way to bring needs to the attention of Government 2 pp; May 234
Trade, Technical and Standards Organizations
Organizations oriented toward concrete and concrete materials 1 p; July 360

BUYERS' GUIDE

Buyers' Guide
A classified index of products and services advertised in Concrete Construction magazine; in 1974 6 pp; Dec. 508

CEMENT

Sulfur Concrete Receives Another Look
Plentiful sulfur may help solve dearth of cement 2 pp; June 295

COATINGS

Another Angle on Salt Scaling
Test results on proprietary material based on copolycarbitol 1 p; Jan. 42

DESIGN

The Life Span of Structures
It's affected by structural, environmental and even psychological factors 3 pp; Feb. 63
More Concrete and Less Glass Saves Energy
Taking advantage of thermal resistance and thermal lag of concrete 3 pp; Oct. 493

ESTIMATING

Estimating Concrete Forming Costs
A four-part series by Frank E. Glasa
Part I: *Avoiding Pitfalls in Estimating Formwork*
There are no such things as an average concrete building and magic numbers in the books 3 pp; Jan. 11
Part II: *What's the Price Tag on Good Formwork for Columns?*
How to keep your shirt when other contractors are losing theirs 3 pp; Feb. 50
Part III: *What Kind of Wall Form Are You Estimating?*
Before considering economy take account of safety and performance 4 pp; Mar. 98
Part IV: *Estimate Formwork Costs Accurately or Reckon with the Results*
How to analyze wall gangs, beams and decks 4 pp; Apr. 154
Matching the Formwork System to the Job
Counting the operations and costs of materials to get a comparative value for your job 4 pp; July 345

FIBER-REINFORCED CONCRETE

Fibrous Concrete Overlay Gets the Big Test
Comprehensive study begun in Greene County, Iowa 3 pp; Mar. 103
Characteristics of Fibers and What They Do for Concrete
If you have an unusual application, fibers may be what you need 2 pp; Mar. 107

FINISHING HARDENED CONCRETE

Blasting with Water
A cleaner way to prepare hardened surfaces 3 pp; Nov. 553

FIRE ENDURANCE

Fire and the Cost of Insuring a Building
Best fire endurance and lowest premiums go together 2 pp; Aug. 391
What Is a Standard Fire Test?
Interpreting what fire endurance ratings mean 2 pp; Aug. 393
Designing Greater Fire Endurance into Structures
How to avoid hidden fire and heat routes 5 pp; Aug. 395
Concrete Under Fire
Four concrete structures survived spectacular fires without collapse 2 pp; Aug. 401
Designing Concrete Mixes for Increased Fire or Heat Resistance
Fire endurance can sometimes be doubled by changing the mix 4 pp; Aug. 403
Lessons from the Avianca Fire in Bogota, Colombia
Post-fire investigations provide a tribute to concrete 4 pp; Aug. 409

FLOORS

Reinforced Concrete Slab Systems on Steel Decks
Decking can serve as form, shoring and finished surface 3 pp; Sep. 445

FORMING

Gang Forming in the Field
Jobsite considerations in assembling, tying and reusing 2 pp; Feb. 59
Forming Strategy for the High-Rise
Good choices of forming system and work cycle help control costs 2 pp; Apr. 159
Structural Precision and Beauty Too in Site-cast Concrete
Use of fiberglass-reinforced plastic forms 1 p; Apr. 190
Forming Architectural Concrete
Materials must be used with care and foresight 2 pp; July 337
Formwork Economy
Maximum reuse and efficient handling are keys to low cost 4 pp; Oct. 505

FORM LINERS

Concrete Surfaces — Gaudy or Naked?
Forms and form liners as used in Europe 3 pp; Feb. 55

FORMS AND FORMING MATERIALS

Prefabricated Forms Insulate Walls Permanently
Readily assembled forms produce unusual structural system in less time than conventional methods 2 pp; Jan. 15
Versatile Forms Minimize Hardware Requirements
Reversibility is one of several attributes 2 pp; Sep. 451
The Fastest Tie in the West?
Fast-draw operation tightens heavy-duty tie 1 p; Sep. 461

GROUTING

Which Grout?
How to choose among specialized grouts 4 pp; Oct. 501

HISTORY

Concrete Commemoratives
A stamp collection on this subject makes an interesting hobby 2 pp; Mar. 114
CRSI Completes Fifty Years of Progress 3 pp; Oct. 497

(more)

JOINT SEALANTS

Sealing Joints of Tilt-up and Other Site-cast Panels
Simple precautionary measures ensure positive, long-lasting seals 1 p; Apr. 171

MANAGEMENT

That Rebar Shortage

It's already done some damage and the worst seems yet to come 5 pp; Jan. 3

Coping with Materials Shortages

Shortages require more efficient designs and careful use of materials 1 p; June 275

Efficient Use of Materials at the Jobsite

Prevent waste by efficient storage and protection against foreseeable hazards 3 pp; June 289

Will You Be Building with Concrete in the Future?

Preoccupation with ancient problems may keep us from solving new ones 2 pp; Nov. 539

A Concrete Future

How our mode of living and concrete construction will influence each other 3 pp; Nov. 541

What Are the Business Needs of a Contractor?

What causes failures, and how to succeed 3 pp; Nov. 557

MARKETING

It's Your Move, Mr. Contractor

An active role for the contractor who wants to see his business grow 3 pp; Feb. 53

MATERIAL HANDLING

Snowbird Ski Resort

Concreting at high altitudes and low temperatures 2 pp; Feb. 61

MIX DESIGN

The Efficient Use of Cement

Consider mix and structural design requirements and use of pozzolans 3 pp; June 283

PEOPLE

A Concept — "Concrete is Generous"

Notes on the career of Louis Kahn 1 p; Apr. 214

Roger A. Corbetta — Mr. Concrete — Dies 1 p; July 372

PRECASTING

An Underground Railroad Is Built on Site Above Ground

Pneumatic concrete caissons dig themselves into the ground below the water table 3 pp; Sep. 453

PUMPING

Common Sense Route to Success in Concrete Pumping

Developing competence in management and operation 3 pp; Mar. 111

Pumping — How It Will Grow

There is a need to standardize good practices 4 pp; July 333

QUALITY CONTROL

Reasonable Tolerances for Cast-in-place Concrete

Guides to how close is close enough 5 pp; Apr. 210

Statistical Evaluation is Not All That Hard

How to interpret and use standard deviation and thereby save money 4 pp; July 339

RECREATIONAL USES

Cliff Walls for Climbers

Artificial cliff is wall of recreation building 2 pp; May 217

REINFORCEMENT

The Efficient Use of Reinforcing Steel

Steel is saved by better design and more careful use 4 pp; June 277

REPAIRING

Shotcrete Restoration of a Historic Landmark

Methods used on exterior walls of Frank Lloyd Wright's Unity Temple in Oak Park, Illinois 3 pp; Apr. 161

SHIELDING

Concrete Nuclear Pressure Vessel — First of the New Generation

Fort St. Vrain Station is complete and in operation 4 pp; Nov. 549

SHORING

Reshoring of Multistory Concrete Buildings

Guidelines to providing adequate support 4 pp; May 243

SUMMER CONCRETING

How to Obtain Good Concrete in Hot Climates

Summary of papers from international RILEM Symposium 2 pp; Apr. 169

TILT-UP

Tilt-up Rigging Procedures

Determine them with your erector before the first panel is cast 4 pp; Jan. 7

TOOLS

New Ideas in Concrete Construction

Tools and other products demonstrated at convention of American Society for Concrete Construction 2 pp; Apr. 165

VIBRATING

Removing the Traces of Stratification

Strategic use of vibrators 1 p; Oct. 496

WINTER CONCRETING

Cold Weather Curing for Concrete

Proper curing need not tie up forming equipment unnecessarily 2 pp; Oct. 491

**MEET THE
ALUMINUM
3-FOOTER
FROM
KANSAS CITY!**

FAR MORE PROFITABLE THAN 2-FOOT WIDE PLYWOOD FORMS!

We have a lot to show plywood form users!

Our lightweight aluminum TRIMFORM® System features a 3-foot wide basic panel which weighs less than a comparable height 2-foot wide plywood panel. 50% more square footage is set, stripped and carried each time. (¼ manhours per yard of concrete poured is common.) Boom trucks prove unnecessary.

What's more, field performance proves our rugged, all-welded panels can easily outlast several sets of plywood forms.

Users get far nicer looking walls, also. Wider panels means fewer joints, and metal produces tighter joints and smoother surfaces.

In addition, our forms use approximately 28% fewer ties . . . and can be stacked for commercial work.

GO COMMERCIAL TOOL

Walls, columns, beams and slabs are now formed and poured monolithically with the new, patented TRIMFORM® Ledger System! (Patented #N03614051)

Smooth or "brick" panels. Offered in any height thru 8' and any width thru 36". Get the full story, contact:

**PRECISE
FORMS
INC.**

5920 E. New 40 Highway
Kansas City, Mo. 64129
Tel. (816) 861-8828

50% more square footage but lighter than 2' x 8' plywood forms!
